WickedLabs Inc. is a privately held company specializing in delivering high-performance, secure products and solutions to enable the next generation of communication networks. WickedLabs is headquartered in Princeton, New Jersey, and has offices in the United States and across the globe. WickedLabs is a fast growing, privately held company focused on delivering high-performance communication equipment and infrastructure solutions to the corporate market. WickedLabs offers a broad product line of Secure Network Gateways and Security appliances, as well as consulting, network engineering, and security training services. The company is the only national provider of end-to-end WLAN and IP security solutions for the U.S. Federal government market. WickedLabs is a part of the OpenVPN Technologies, Inc. family of companies. WickedLabs offers a wide range of hardware and software solutions including robust network monitoring, wireless security, and secure VPN. Established in 2010, the company offers corporate customers state-of-the-art management and technical support services, products and services for wired and wireless networks. WickedLabs' products and solutions provide organizations with a comprehensive array of security, networking, and management solutions. I have a number of new servers and think i should set them up, which is the best method to do it and how to ensure these are setup correctly I have a server which is running IIS, ASP.NET, and SQL Server. It is also a domain controller. I have a number of new servers and think i should set them up, which is the best method to do it and how to ensure these are setup correctly. Thank you very much. If you have access to a windows domain, then this should be an extremely easy job. If you don't, then you need to create a local user account. Locating the Data Either way, you will need to find the information you want to put on the new server. Creating a user account on the new server In order to create a user account on the new server, we'll need to either configure a new user or import the existing user account on the old server. If you're using a domain-based method, you'll need to find the user account you want to create the new server with. You will need to do the following: Right click on the account Select Properties Select the Log on as column. You will 82157476af
